

SHUBHAM SINGHAL

Senior Software Engineer | Distributed Systems | Backend Platforms | AI-Native Engineering

Bengaluru, India | shubhamsinghal.coder@gmail.com | +91 72082 77045 | [LinkedIn](#) | [GitHub](#)

SUMMARY

Senior Software Engineer with **8+ years of experience** designing and scaling distributed systems and business-critical backend platforms. Led multi-engineer initiatives from ambiguous problem discovery through architecture and production rollout, delivering outcomes including **\$4M+ business impact**, **80% latency reduction**, and multi-day operational workflows reduced to hours.

Data-driven engineer focused on measurable outcomes, observability, production readiness, architectural trade-offs, and leveraging **AI and automation** to improve engineering productivity.

EXPERIENCE

Uber

Jun 2022 – Present

Senior Software Engineer

Bengaluru, India

Selected Technologies: Go, Java, Kafka, Redis, Apache Pinot, MySQL, gRPC, Docker, Kubernetes, Distributed Systems, AI Workflows

Technical Leadership: Led initiatives across teams of up to **8 engineers** as Merchant Growth technical lead and later as **Policy Authoring Lead and cross-team SME** for Content and Policy Authoring. Drove architecture, design reviews, mentoring, collaborative problem solving, metrics, alerting, production readiness, and data-driven engineering practices.

- **Personalized Merchant Growth Platform:** Led an extensible recommendation platform serving **~2M merchants**, combining batch-generated insights, real-time eligibility, ranking, A/B experimentation, and business monitoring; drove **~\$4M in business impact**.
- **Chargeback Platform Redesign:** Redesigned a platform processing **~100K cases/day** across **30–40 signals and multiple upstream systems**, reducing eligibility determination from **~3 days to ~1 hour**. Led ERD/POC, architecture alignment, production rollout, shadow validation, correctness monitoring, alerting, and dispute workflows.
- **Cancellation Refund Bleed:** Proactively identified **~\$1M in annual historical refund leakage** while working on a separate cancellation-validation initiative. Uncovered a fraud-detection gap, redirected the project toward the higher-impact root cause, and reduced the problematic cancellation pattern by **~60%**.
- **AI Policy Authoring Platform:** Led development and productionization of a natural-language policy authoring system covering requirement discovery, exception handling, policy generation, staging publication, and production-log validation. Reduced authoring time from **~14 days to ~1 day** and demonstrated throughput by authoring **17 policies in one day with ~20 authors**.
- **AI Content Safety System:** Designed and productionized an AI-powered validation system using code, configuration, content-dependency, and production-traffic signals to classify changes as safe, soft-blocked, or hard-blocked. Validated **~250K nodes** and blocked **~6.6K unsafe deletions** during a 220K-node bulk operation, mitigating a failure mode previously associated with **~7 production incidents, including an L5**.
- **Content Segmentation Platform:** Replaced bespoke integrations across **~20 segmentation attributes** with a reusable, configuration-driven hydration model. Reduced onboarding from **~30 to ~7 engineering days (~77%)**, onboarded **6 new attributes**, and established a single source of truth for legacy migration.
- **Tier-1 Performance Optimization:** Prioritized bottlenecks using an impact-vs-effort phased strategy and reduced endpoint latency from **~3s to ~600ms (80%)** through parallel execution, computation reuse, caching, and hot-shard query optimization.

Flipkart

Software Development Engineer II

Feb 2021 – Jun 2022

Bengaluru, India

- Built **event-driven pricing and promotion systems for Flipkart's Big Billion Days**, partnering with product and business teams to support high-scale sale events and deliver initiatives contributing to **~\$1.5M+ annual revenue impact**.
- Recognized with the **Instant Karma Award** and team awards for engineering impact.

Jio

Software Development Engineer

Nov 2020 – Feb 2021

Hyderabad, India

- Owned backend development for the **Jio Health Hub web platform**, designing and delivering backend APIs and services supporting core healthcare workflows.

CLSA

Research Application Analyst

Jul 2018 – Nov 2020

Pune, India

- Built and maintained internal backend applications supporting enterprise workflows, including an **event-management platform** and company-wide communication chatbot used by **2,000+ employees**.
- Designed and developed an **instance monitoring system** providing centralized visibility into application instances, hosts, and overall system health, improving operational monitoring and issue detection across deployed services.

TECHNICAL SKILLS

Languages	Go, Java, Python, C++
Distributed Systems	Microservices, Event-Driven Architecture, System Design, Multithreading, REST, gRPC, Apache Thrift
Data & Streaming	Kafka, Apache Flink, Apache Pinot, MySQL, Redis, Elasticsearch, NoSQL, Database Schema Design
Infrastructure	Docker, Kubernetes, Grafana, Arize, Jaeger, Distributed Tracing, Performance Optimization, Production Reliability, Incident Response, A/B Experimentation

RECOGNITION

- **Uber:** Recognized as a **Top 25 Interviewer** and received multiple Kudos recognizing impact across **Go Get It, One Uber, Do the Right Thing, and Build with Heart**.
- **Flipkart:** Received the **Instant Karma Award** and team awards for engineering impact.
- **CLSA:** Received the **Star Award – Q1 2020**.

EDUCATION

Bachelor of Engineering – Computer Science

2014 – 2018

Pune University

Pune, India

First Class with Distinction | 77.4% | Top 5 in College
